

ENVIRO-USA™ CASE STUDY

Arkansas Debris Boom

Location

Arkansas

Industry

Home Owner

Application

Debris Control

Objective

Homeowner wanted to prevent debris from reaching his shore

Solutions

Enviro-USA™ recommended using our 10" debris boom

PROJECT HIGHLIGHTS

- Prior to contacting us, this customer needed to clean out his cove daily. There was constant accumulation of debris, leaf liter, and trash from the lake that would eventually end up on his cove, fouling his property and access.
- Enviro-USA™ provided our debris boom to span across the cove in a low visibility color
- The boom now serves as a deterrent for the floating debris while still giving the client the view of the waterway he desired.
