

ENVIRO-USA™ CASE STUDY

British Virgin Islands

Location

British Virgin Islands

Industry

Hospitality and Tourism

Application

Sargassum Control

Objective

The client needed to protect the beach near the property's marketplace to ensure guests were not impacted by the seaweed fill egress and ingress

Solutions

31" Sargassum Boom

PROJECT HIGHLIGHTS

- The marketplace owner in BVI wanted to keep sargassum accumulation to a minimum on the area of the beach where he and several other businesses had straw markets for tourists and guests.
- Enviro-USA™ provided our 31" sargassum boom and recommended a deployment design to provide optimal protection of both beach and harbor.
- His beach is now the cleanest in the area and more guests are shopping with his tenants than the alternative options because of the beach conditions.
