

ENVIRO-USA™ CASE STUDY

City Outside Seattle

Location

Washington

Industry

Municipality

Application

Debris Control

Objective

Wanted to prevent debris from entering the lake from adjacent waterways

Solutions

Enviro-USA™ PermBoom

PROJECT HIGHLIGHTS

- The municipality was facing regular clean-out and removal debris of the pond, which is the central focal point for the main town square and park but required preventative barriers to divert debris.
- Enviro-USA™ provided our belted perm boom to span across the canal's entrance in a low visibility color to minimize the impact to surrounding properties.
- The boom served as a deterrent to the floating debris while still giving the community a pleasant visual without any harsh distraction for the residents and guests of the area.
