

30" Coastline Standard Oil Containment Boom

What is a 30" Coastline Standard Oil Containment Boom and who is it for?

This Enviro-USA boom is ideal for Coastlines and Unprotected Ports as it offers a high freeboard and good skirt depth. The bigger float will prevent splash over due to waves breaking, windy conditions and choppy water and a 20" skirt depth will prevent oil from escaping below the skirt. The primary users are spill response contractors.

Why use Oil Containment Booms?

Oil containment booms are used in coastline water as a first response to an oil spill or by Spill Response Contractors to divert, control and maintain an oil spill. Once the spill has been contained the contractor will then proceed to recover and clean up the oil.

Where are 30" Coastline Standard Oil Containment Booms used?

Enviro-USA's 24" Coastline Standard oil boom is most commonly used in:

- Unprotected Ports
- Harbors
- Gulfs

- Beaches
- Coastlines

Specifications

This Enviro-USA boom is compliant with OPA 90, [US Coast Guard – OSRO and ASTM F1523 Guidelines](#).

- Oil Booms are available in 50 and 100 foot sections or any custom length up to 100'.
- Numerous sections can easily and quickly be connected together.
- Numerous fabrics are available for short or long term deployments.

10” Freeboard & 20” Draft, 22 oz. PVC fabric, top tension cable, ballast chain, and ASTM connectors.

This boom comes with a top tension cable which provides great tensile strength in order to better handle the forces from strong currents, tide changes, windy conditions and choppy water.
