

ENVIRO-USA™ WORK SCASE STUDY

Michigan Boom

Location

Michigan

Industry

Utilities

Application

Debris Control

Objective

Power company needed to keep debris away from the cooling intake

Solutions

18" Perm Boom

PROJECT HIGHLIGHTS

- The power plant was being inundated with debris flowing downstream and being introduced to the power plant's water intake drains.
- Enviro-USA™ manufactured an 18" belted perm boom and recommended a deployment to provide optimal protection of the intake while protecting the overall waterway appearance from the viewable area surrounding the facility.
- Significant recreational and beautification was a side-benefit of the successful deployment with local residents commenting on the vast improvement to their adjoining properties.
