

ENVIRO-USA™ WORKSCASE STUDY

SC HOA

Location

South Carolina

Industry

Property/Facilities Management

Application

Debris Control

Objective

The HOA needed to protect their pond from runoff coming from the adjacent canal

Solutions

Debris Boom

PROJECT HIGHLIGHTS

- The HOA needed to clean out the pond in the neighborhood weekly. The debris flowing from the small canal was traveling into their private pond system causing imbalances in water quality and vegetation.
- Enviro-USA™ provided a low-visibility debris boom to span across the canal to protect the area without being a distraction to residents.
- The boom serves as a deterrent for the floating debris and provides a natural point of collection so the debris can easily be removed from their predetermined central location.
