

36" Offshore Fast Deployment Oil Containment Boom

What is a 36" Offshore Fast Deployment Oil Containment Boom and who is it for?

This product made by Enviro-USA is an oil containment boom that is used to prevent oil from spilling in vast offshore areas. It is used for fast response in emergency offshore operations.

Why use Fast Deployment Oil Containment Booms versus Standard Booms?

Oil containment booms are used in offshore water as a first response to an oil spill or by Spill Response Contractors to divert, control and maintain an oil spill. Once the spill has been contained the contractor will then proceed to recover and clean up the oil. The main advantage of using a Fast Deployment boom is the reduced time it takes to deploy thanks to the use of a reel system.

Where are 36" Offshore Fast Deployment Oil Containment Booms used?

Enviro-USA's 36" Offshore Fast Deployment oil boom is most commonly used in:

- Offshore waters
- Unprotected ports
- Harbors
- Gulfs
- Beaches
- Coastlines

Specifications

This Enviro-USA boom is compliant with OPA 90, [US Coast Guard – OSRO and ASTM F1523 Guidelines](#).

- Oil Booms are available in 50 and 100 foot sections or any custom length up to 100'.
- Numerous sections can easily and quickly be connected together.
- Numerous fabrics are available for short or long term deployments.

12” Freeboard & 24” Draft, 22 oz. PVC fabric, top tension cable, ballast chain and ASTM connectors.

This boom has a flat float, is light weight and does not require inflation. It stores and deploys from a hydraulic reel thereby occupying **less space, less manpower** and **1,000 ft can be deployed in 8-10 minutes with minimal personnel** (3- 4 persons). It has a top tension cable which provides great tensile strength, which is required in offshore operations due to strong currents, tide changes, windy conditions and choppy water.
