

Anchor Systems – on LAND

Enviro-USA's Land Anchoring System comes complete with all that is required for anchoring/securing a floating turbidity barrier to land.

Turbidity Barriers are commonly required around marine construction work areas and 95% of the time they need to be secured/anchored to a river bank, beach or just on land. Enviro-USA's Land Anchoring Systems provide a quick and easy solution for this application as they are completely assembled and ready to be used.

Land Anchoring Systems are also used to keep oil containment boom in place while allowing for the recovery / clean up of an oil spill to take place.

Enviro-USA's Land Anchoring Systems include:

- 1 each – 12", 18" or 24" ASTM Marine Grade Universal Connector
- 20' of 5/8" poly rope,
- 1 each – 15" or 30" Ground Auger Anchor

Installation: is as easy as attaching the tow bridle to the Turbidity Curtain or Oil Boom, driving the auger anchor into the ground and adjusting the poly rope to the preferred length.

Note: The tow bridle that is provided with the Land Anchoring System should also be used to tow the floating turbidity curtain around as it's being installed and put in place around the work area.
