

Type 2 Medium Duty Silt Curtain

What is a Type 2 Medium Duty Turbidity Curtain and who is it for?

DOT Type 2 floating turbidity barriers are ideal for **containing silt and turbidity in moving water applications**. These silt curtains are used to control and contain silt / sediment within an immediate work area thereby preventing anything from floating down stream and affecting marine life. Floating Turbidity Curtains **protect our waters and environment** whenever construction occurs in a marine environment.

Floating Turbidity Barriers are normally **used by contractors working in, around or nearby a body of water**.

Why use an DOT Type 2 Medium Duty Turbidity Curtain vs. another type of barrier:

The Type 2 model is recommended when compliance with United States DOT floating turbidity curtain requirements is a factor and the marine construction project happens in moving water application.

Where are DOT Type 2 Medium Duty Turbidity Curtains used?

- Rivers
- Inland waterways
- Harbors

- Protected Ports
- Lakes with wind and or current

Specifications

Enviro-USA's Floating Turbidity Curtains are available as Permeable or Non-Permeable skirt, in **50 & 100 ft sections** or **any custom length up to 100'**. The depth is available as required by project requirements and can be **as deep as 50 ft**. Numerous sections can easily & quickly be connected together.

A **permeable skirt** is important if there is the need to allow water to flow through while containing silt or turbidity. Enviro-USA's Floating Turbidity Barriers are manufactured in accordance and in compliance with most United States DOT requirements.

NOTE: Float size is determined by skirt depth and or your job requirements

Enviro-USA's Floating Silt & Turbidity Curtains are manufactured in Florida and comply with most calm water project requirements.
