

## Floating Marker Lights

**Enviro-USA's Floating Marker Lights** are 51" tall

(24" above water line & 27" below) and are ideal for indicating day or night where Floating Turbidity Curtains, Oil Booms or Anchor Systems are thereby preventing anyone from running into them.

Enviro-USA's Floating Marker Lights use a Day/Night sensor that automatically turns on at dusk and off at dawn, it flashes every 3 seconds and has a 1 mile visibility.

INSTALLATION is as easy as throwing it in the water and clipping it to the floating turbidity barrier, oil boom, dock or boat, via the clip on 6 ft lanyard. A very practical product to keep around as it is very inexpensive and provides a safer work environment.

**Enviro-USA's Floating Marker Lights are ideal for:**

- Indicating "Location & "Caution" around marine construction work areas such as: Bridge construction, dredging, docks and seawalls.
- Around marinas to indicate /illuminate waterway.
- In lakes around campsite swimming areas to keep boats out.
- At end of docks for boating safety purposes on bad weather nights as approaching in.

Marker Lights are often used in areas where there is a lot of boat traffic, recreational activities and/or numerous responders working in a large oil spill.
