

Floating Tow Bridle

Enviro-USA's Floating Tow Bridles connect to the end of Oil Boom or Turbidity Curtains and are used to tow the boom around while getting it in place. Tow Bridles are also commonly used to secure turbidity curtains or oil boom to the bank of a pond, river or shoreline. Tow Bridles protect and prolong the life of the Oil Boom or Turbidity curtain by evenly distributing the towing load or constant tension to the top tension cable, ballast chain and over to the other connectors.

Tow Bridles are inexpensive and allow the boom to be towed more uniformly thereby protecting it.

All of our Tow Bridles come with floats to prevent from loosing if dropped in water.

Enviro-USA's Floating Tow Bridles are available as:

- Tow Plate – for small boom (10" or less) and to secure boom in place in river deployment.
- Small Light Duty – for 18" boom or less and to secure boom in place in river deployment.
- Medium Light Duty – for 24" boom or less.
- Large Light Duty – for 36" boom or less.
- Large Heavy Duty – for permanent boom.
